

GS1NET CATALOGUE

BOOSTED BY OVER 12,500 GTINS

Innovit's iICE solutions successfully loaded the largest GS1net/NPC catalogue.

innovit

→ GS1net has been significantly increased by the successful loading of one of the largest supplier catalogues. Steel & Tube Ltd, one of New Zealand's major hardware suppliers, has loaded their entire product and price catalogue on GS1net to meet B2B trading compliance with Mitre10 New Zealand.

"Creating a GS1net catalogue has been a major initiative within our company," said Robyn Cameron, IT Manager at Steel & Tube. "To ensure the sustainability of such a sizable catalogue, we invested in iICE Validator for GS1net – a certified middleware product from Innovit. iICE Validator allowed us to integrate to our back-end system, but more importantly provide a gateway to ensure our catalogue was validated and correct prior to uploading onto GS1net."

Innovit CEO, Mr Bang Chau, explained that loading a catalogue of this size required special attention. "Our implementation team worked very closely with GS1net's

Technical Manager, Justin Middleton, to monitor the initial upload. Working with this enormous catalogue was a good stress test for Innovit's iICE solutions. Justin provided all parties with regular status updates throughout the upload process to ensure that each item and price record was loaded successfully," he said.

Innovit's iICE Adaptor for GS1net (v2.0) solution for Suppliers is certified for GS1net/NPC by GS1 Australia. GS1 Australia recommends that the upload of large GS1net catalogues be managed through certified GS1net product partners such as Innovit.

Johnson & Johnson, the world's largest healthcare manufacturer, is the latest addition to Innovit's community of iICE users. Working with GS1 Australia, a catalogue in excess of 44,000 GTINs has been recently uploaded to GS1net which hosts the National Product Catalogue for the Australian Healthcare sector, which in turn will populate the procurement systems of each state-based health department.
